The most important thing we build is trust

The Cobham Tactical Communications and Surveillance MultiVue is a briefcase receiver package, with domo technology at its core, for team-based tactical video surveillance operations. It will simultaneously decode and display four separate digital video channels, allowing its operator to observe activities in four different locations or four views of one location. Typical applications include tactical surveillance teams and first responder and emergency teams. Equipped with dual diversity antennae inputs, the MultiVue ensures excellent video reception quality.

The MultiVue combines four Cobham SOLO Receivers with two diversity down-converters and two antennae into one rapidly deployable briefcase kit. A comprehensive touch screen interface is provided for user control. A colour monitor is mounted in the lid and can be user-controlled to display a quad image, or any one of the four individual images. Video and audio outputs are provided at the rear of the unit for recording, while local audio monitoring is provided via headphone outputs. The MultiVue capabilities can be extended with optional IP streaming, and optional microwave relay retransmission. The unit can be AC or DC powered. All cables are included.

The narrow bandwidth modulation offers unprecedented spectrum efficiency, while also increasing the system sensitivity and, therefore, range.

The MultiVue has comprehensive On Screen Display diagnostic capability to show link quality and spectrum and is equipped with video, two voice and data channels. Security of transmission is ensured by the use of optional AES128/256 bit encryption algorithms.
