

As stated in Pub. No. 22407, Manufactures Advisory Service Bulletin - Pressure Gauge Hose Assembly, Cobham is switching soft good materials from nitrile to viton, especially in high pressure applications. At the same time we are addressing misleading Part Descriptions such as "PACKING (CANCELED)" and have adopted a uniform part numbering system based on L-Series O-Ring numbers.

This transition is beginning with our new modular spares kits that have been created to reduce lead times and provide our customers with individual soft good kits for sub-systems of the underwater breathing apparatus. Thank you for your understanding as we begin this transition to speed delivery of product to our customers.
