

Multi-Missile Launcher – MML

COBHAM

The most important thing we build is trust

Multi-Missile Launcher – MML

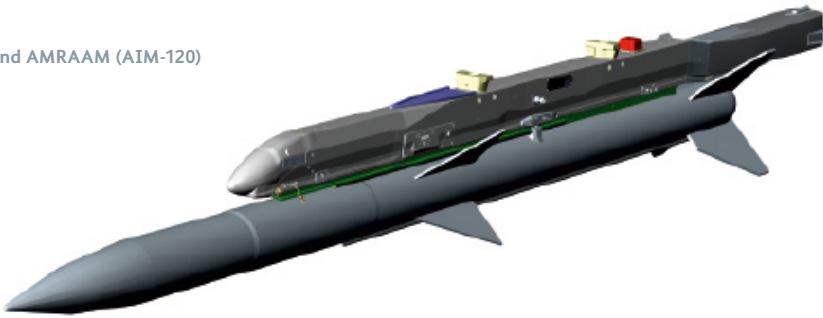

The Multi Missile Launcher (MML) is a state of the art rail missile launcher capable of carrying a range of different missiles without the need for role change; a unique modular construction allows the MML to adapt to a wide range of short, medium and beyond visual range missiles. The MML can also be fitted with the BOL countermeasures systems for additional operational flexibility.

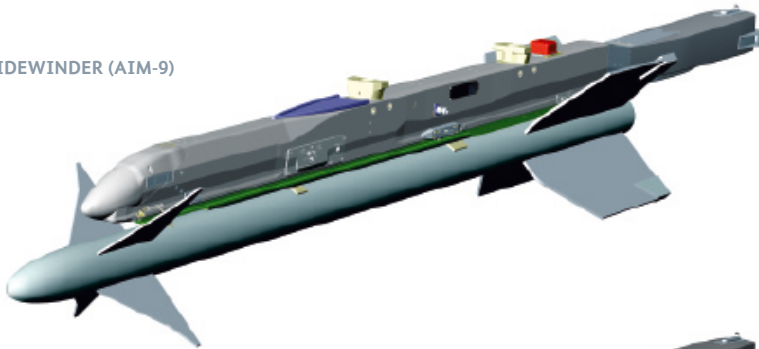

Key Features

- Certified for use with AIM-9, AIM-120, BVRAAM, IRIS-T
- First launcher to fire the Meteor missile
- BOL countermeasures capability
- NATO compatible solutions available

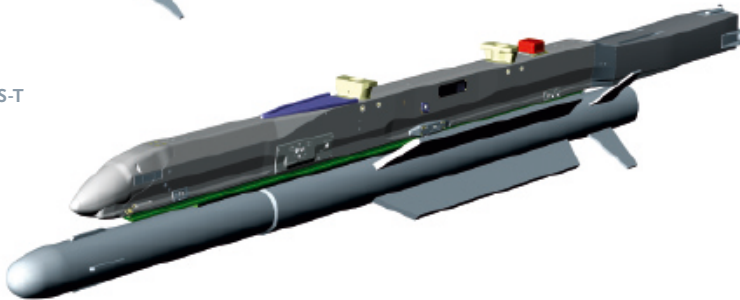

MML and AMRAAM (AIM-120)

MML and SIDEWINDER (AIM-9)

MML and IRIS-T

Multi-Missile Launcher

Payload capacity	Up to 342lb/155kg
