Sea Tel introduces the new Model DTV04 HD TVRO Antenna with Auto Skew Feature

Concord, CA – Sea Tel Cobham is pleased to announce the release of the much anticipated DTV04 HD Antenna System on April 23, 2009.

The DTV04 HD is the first and only 3-Axis Marine Stabilized Antenna System that is compatible with DIRECTV's® Ka-Band satellites. The DTV04 HD is also the only Marine Stabilized Antenna System that can

deliver 3 Ku-Band satellites (101W, 110W, and 119W) and 2 Ka-Band satellites (99W and 103W) simultaneously with one antenna system.

To receive all 5 satellites simultaneously the antenna and feed assembly are required to be skewed to a specific angle for your operating area. The DTV04 HD features an Auto Skew function that adjusts the skew angle automatically, which enables the system to move seamlessly from region to region without having to manually adjust the skew angle on the antenna and feed assembly.

The design of the DTV04 HD Antenna System offers more value than any other system on the market as the need for an additional Ka-Band antenna has been eliminated. Another value added feature that this system gives you is the ability to watch any authorized DIRECTV®

channel at any time on any satellite receiver eliminating the need for a master receiver. This is the first and only system in the marine market that has this capability.

The DTV04 HD Antenna System is compatible with DIRECTV® service in the United States only and requires an H20 or H21 receiver to receive High Definition programming from the Ka-Band satellites.

The DTV04 HD comes in a 50 inch Radome assembly and is the perfect solution for oil rigs and vessels 100 feet and above that can't live without their DIRECTV® High Definition programming.

Please contact your local dealer for more information regarding price and availability.

NOTES TO EDITOR

Cobham Marine Systems is one of the world's leading manufacturers of marine stabilized antenna systems for satellite communications and satellite television at sea. The company has almost 30 years of experience and is dedicated to constant improvement through innovation and design enhancement. Sea Tel has produced over 25,000 marine stabilized antennas. For more information, go to www.cobham.com/seatel or contact peter.broadhurst@cobham.com.

Cobham plc is an international company engaged in the development, delivery and support of advanced aerospace and defence systems for land, sea and air platforms. The company has five technology divisions and one in the service sector that collectively specialise in the provision of components, sub-systems and services that keep people safe, improve communications and enhance the performance of aerospace and defence platforms.
