### **Cobham Demonstrates Eagle Close Combat Radio at DSEi**

LONDON, United Kingdom – Cobham will demonstrate its new Eagle Close Combat Radio (CCR) this week at the 2009 Defence Systems & Equipment International (DSEi) exhibition.

Eagle is a third generation, full duplex, ad-hoc networked radio specifically designed as a short range Infantry Section/Squad radio. It allows up to five talkers to speak simultaneously in a conference mode, and provides a simultaneous encrypted voice and data capability, allowing complete flexibility of use. Eagle incorporates an automatic rebroadcast facility which both extends its range and provides excellent coverage in urban areas.

In recent months, Cobham Defence Communications has secured several orders of undisclosed value for nearly 10,000 Eagle CCRs from customers in the Middle East, the Far East and Africa, with further orders expected imminently.

Eagle has also been incorporated within Cobham's Marine Interdiction Operations System (MIOS) – also on display at DSEi – to provide improved communications and situational awareness for Boarding Party operations. Cobham's new TacG2 vehicle intercom system will also be able to interface with Eagle to provide a dismounted, fully conferenced, wireless intercom system linked to armoured vehicles.

For more information about Eagle or the Company's other offerings, please visit Cobham on stand number 969 at DSEi 2009.

### **About Cobham:**

Cobham's products and services have been at the heart of sophisticated military and civil systems for more than 70 years, keeping people safe, improving communications, and enhancing the capability of land, sea, air and space platforms. The Company has four divisions employing more than 12,000 people on five continents, with customers and partners in over 100 countries and annual revenue of more than £1.4bn / US\$2.1 billion.

Cobham Defence Communications provides command, control, communications and situational awareness for military platforms / infantryman, improving combat efficiency and survivability of fighting platforms and troops prior to and in contact with the enemy. Many of the world's leading armed forces place their trust and reliance in the Cobham's family of interoperable tactical intercom systems, which can be 'mixed and matched' to fit specific platforms reducing capital costs compared to alternative systems.
